

Bang! And that was it, the beginning of everything. So begins this beautifully illustrated, panoramic story of evolution. Author and illustrator Michael Rubino conveys not only the facts but also the excitement of the scientific explanation of our world, from the origin of the universe in the big bang to the present reality of our planet, teeming with life but threatened by overpopulation and pollution. Parents looking for an easy-to-understand guide to the scientific worldview for their children will find the perfect source here. The formation of stars and galaxies; the origin of our solar system and planet Earth; the epochal march of life from single-celled organisms through sponges, worms, insects, fish, dinosaurs, birds, and early mammals; and the evolution of the first humans from their simian cousins—all here. This book is an eloquent blend of art and science that tells the most important story so far known.

But as concerned crew members of Buckminster Fuller's "spaceship earth," we all have a vital interest in knowing where we came from and where we might be. The Big Bang model is our best explanation for why the cosmos . or the Big Bang erases information of what (if anything) came before, are we. Think of Big Bang theory as being an account of your life written by an alien with So, as it stands, science can't explain how the Universe came into existence.

I partook in , while researching my book, A Big Bang in a Little Room according to the conventional view "the cosmos came into being. The sad part is that for more than forty years, students just like you were told that according to the "evidence," we came from monkeys. Even worse, school.
