

The world is filled with people, vehicles, and other objects that are constantly in motion. After studying the force of gravity in the late 1600s, English scientist Isaac Newton developed three laws of motion that described an objects inertia and friction. His third law was the basis for the well-known phrase for every action, there is an equal and opposite reaction. Whether you are walking to school, playing a sport, or riding a roller coaster, these laws of motion govern the way we live.

Investigating Forces and Motion is an expository nonfiction text that explores speed, velocity, and acceleration, balanced forces, Newton's Laws of Motion.

Students will explore simple machines, gravity and inertia, as they help students understand six concepts related to force and motion. But once you get something moving, what makes it stop? Newton's third law of action and reaction explains how objects affect each Physics on the Playground.
