

International Weather Radar Networking covers all aspects of the subject in a collection of contributions drawn from all over the world. Of particular interest are the papers describing work in Eastern Europe and papers reviewing of the achievements of the Commission of the European Communities COST-73 project. During the last twenty years there has been a rapid growth in the number of digital radars deployed for operational use in Western Europe. There are now around 100, of which about half have a Doppler capability, providing wind as well as reflectivity information. The international exchange of the data from these systems promises a great enhancement of the benefits to weather forecasting and commercial users. This volume reports work being undertaken to realize those benefits and points the way to future developments of radar technology.

LAffaire Crainquebille (French Edition), Passover Haggadah, Pomes Anglais (French Edition), Handbook of Research on ICTs and Management Systems for Improving Efficiency in Healthcare and Social Care, Schlafende Hunde, Open Scotland?,
