

This report, marking the close of OECD's Technology/Economy Programme, examines some of the key interactions between technological and economic factors. The analysis addresses major current issues, including globalization, international competitiveness, the state of the environment, and the prospects for developing countries. Horizontal unifying themes clarify the key relationships. These themes include innovation as an interactive process, cooperation among firms and institutions, the part now played by intangible investment, increasing returns to scale, technology and cumulative learning mechanisms, and technology diffusion and organizational change.
